

Fine Dust Collection System

With the Fine Dust Collection System, you will be able to mill materials 0.30" (7.62mm) thick and keep your machine clean. Eliminate the need for extensive vacuuming after each job and reduce the long-term impact of dust on your machine. In addition to the maintenance and cleaning benefits, your end mills will last longer and your machine will maintain a more consistent internal temperature during milling. To read more about how to use the fine dust collection system, please refer to our support guide.

If you have an Othermill or Othermill Pro, you can use our \$15 Vacuum Port Upgrade to get your machine ready for easier cleaning and upkeep, and add the Fine Dust Collection System when you are milling PCBs and other thin materials.
