

Surface Mount 500 mW Zener Diodes

Screening in reference to MIL-PRF-19500 available

DESCRIPTION

The popular 1N5985BUR-1 thru 1N6031BUR-1 series of 0.5 watt Zener voltage regulators provides a selection from 2.4 to 200 volts in 10%, 5%, 2% and 1% tolerances. These glass surface mount DO-213AA Zeners are also available in various military equivalent screening levels by adding a prefix identifier as described in the “part nomenclature” section. Microsemi also offers numerous other Zener products to meet higher and lower power applications.

** These may also be ordered as MLL5985B thru MLL6031B for the applicable part number and tolerance in this series.

NOTES:

1. Zener impedance is derived from the 1 kHz ac voltage that results when an ac current having an rms value equal to 10% of dc Zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK} . See "MicroNote 202" for dynamic impedance variation with other operating currents.
2. Voltage measurements to be performed 20 seconds after application of the dc test current.
3. The maximum Zener current I_{ZM} shown is for the nominal voltages. The following formula can be used to determine the worst case current for any tolerance device:

$$I_{ZM} = \frac{P}{V_{ZM}}$$

Where V_{ZM} is the high end of the voltage tolerance specified and P is the rated power of the device.
