| IEC62055-31 UC3 compliant (short current 3,000 A) 1 Form A 120A power latching relays | DZ RELAYS (ADZ) |

Horizontal terminal type

Vertical terminal type

RoHS compliant

Protective construction: Dust cover type

FEATURES
1. **IEC62055-31 UC3 compliant (short current 3,000 A)**
2. **High switching capacity**
120 A 250 VAC (Resistive load)
3. **Twin contacts for low temperature rise**
4. **Low operating power**
1 coil latching: 1.4 W
2 coil latching: 2.8 W
5. **Small size: W: 41 x L: 35 x H: 22 mm**
W: 1.614 x L: 1.378 x H: .866 inch

TYPICAL APPLICATIONS
1. **Smart meters**
2. **Charge station**
3. **Other industrial equipment**

Unit weight			Approx. 75 g 2.65 oz	

Notes: *1. This value can change due to the switching frequency, environmental conditions, and desired reliability level, therefore it is recommended to check this with the actual load.
*2. Wave is standard shock voltage of ±1.2 × 50 μs according to JEC-212-1981
*3. The upper limit of the ambient temperature is the maximum temperature that can satisfy the coil temperature rise value. Refer to Usage, operation, transport and storage conditions in NOTES.
*4. IEC62055-31 UC3 compliant
*5. Based on IEC62055-31 UC3, inductive load test was conducted after resistive load test, and expressed as total.

NOTES

1. For cautions for use, please read "GENERAL APPLICATION GUIDELINES" on page B-1.

2. Operation, transport and storage
Following is the conditions of ambient temperature, humidity and air pressure in case of operation, transport and storage.
1) Ambient temperature: –40 to +85°C –40 to +185°F (Max.100A over 70°C 158°F)
2) Humidity: 5 to 85%RH (Not freezing and condensing)
In addition the humidity range depends on temperature.
The allowable ranges are as follows;
3) Air pressure: 86 to 106kPa
Allowable range of ambient temperature and humidity for operation, transport and storage.

4) Condensing
Condensing occurs when the relay is exposed to sudden temperature change in a high-temperature, high-humidity atmosphere. This may cause some troubles like insulation failure.
5) Freezing
At temperature below 0°C 32°F, moisture may freeze. This may lead to some troubles like sticking of the moving portion of the relay or delayed operation.
6) Low-temperature, low-humidity atmosphere
If the relay is exposed to a low-temperature, low-humidity atmosphere for a long time, its plastic parts may become brittle and fragile.

3. Soldering and cleaning
1) In case of soldering, following conditions should be observed.
Manual soldering:
Max. 260°C 500°F (solder temperature) within 10s (soldering time)
Max. 350°C 662°F (solder temperature) within 3s (soldering time)
* Furthermore, because the type of PC board used and other factors may influence the relays, test that the relays function properly on the actual PC board on which they are mounted.
2) Since this is not a sealed type relay, do not clean it as is. Also, be careful not to allow flux to overflow above the PC board or enter the inside of the relay.

4. Terminal installation condition
Installation torque for contact terminal (M4): 1.2 to 1.4 N·m

5. Cautions for use
1) This relay is designed to dust cover type. Malfunction and contact failure may result if small insects get inside the relay.
2) Installation of M4 securing screw for contact terminal
Do not apply excessive pressure on the terminals. This could adversely affect relay performance. Use a washer in order to prevent deformation.
Keep the installation torque to within 1.2 to 1.4 N·m (12 to 14 kgf·cm).
Also, use a spring washer to prevent it from loosening.
3) Through hole on the relay is for temporary fixing use. Do not fix relay through hole only.
